

What Our Clients Are Saying

About how the KSM™ supercapacitor fits their needs

“The KSM™ is truly amazing”

“Normally, you’ll get around 300 cycles out of a well maintained battery, but the KSM is designed to run 1,000,000 cycles. It will outlive the boat, the motor—even the owner. It’s like having an emergency battery permanently on standby without any of the maintenance an actual battery requires.

“As simple as its purpose may be, the KSM is truly amazing. I’m shocked nobody came up with this sooner, as it’s only a matter of time before every boat has one. Owning a KSM is like having an emergency ‘get out of jail free’ card that you can use over and over, whenever you need it.”

—**Christopher Labozza**, Executive Vice President
Precision Marine Center

“The KSM gives me an added sense of security”

“I couldn’t be more pleased with the supercapacitor and the support provided by Kold-Ban in planning and executing the installation. The KSM facilitated replacing two 8D starting batteries with two Group 31 AGM starting batteries, freeing up valuable space in a very crowded engine room on a 41’ double cabin yacht. The capacitor spins the Detroit diesel engines faster than possible with the tow 8Ds paralleled. In fact, it started the engine three times on its own with the battery disconnected! The ability to recharge the capacitor from almost any 12 volt source, if necessary, gives me an added sense of security.”

What Our Clients Are Saying *Continued*

Know your engine will start every time

“I have been running the KBI unit for two seasons now without any issues. It really is a well built product and definitely has a need in the marine industry. I no longer have to worry about playing my radio too long while sitting at a sandbar or forgetting to shut off a switch on the dashboard when covering up the boat after use. When I go back to the lake for the next round of fun, I know I will be able to start the engine.”

—**Erik Schubert**, Boat Owner

The KSM reduces battery weight and footprint

“I think the KSM could give builders of ultra high performance sport fishing boats a competitive advantage. The supercapacitors replace a large starting battery bank, reducing weight and footprint in the engine room. Our technicians like it, because it means no more hauling 8D batteries out of the engine room, and it extends the life of the starter.”

—**Sean Prendergast**, Training Manager
Gregory Poole CAT

You never need to panic with the KSM

“I have a 34' houseboat and was not used to starting the engine from the switch I installed to activate the KSM. One day, I put the key into the ignition and heard the worst sound you can hear while in the middle of the lake: click, click, click. I started to panic, but then I remembered I had the KSM. Three cranks later we were off to the dock. The KSM was super quick and easy to install. I will be purchasing a newer 50' houseboat next year with three engines to take on the Big Loop, and I will definitely be taking this with me. The added insurance to know I can start my engines is priceless to me.”
